

Ridge-Guard™

The Long Term Solution

Ridge vents are the most popular types of ventilation for attic spaces. However, the current design of most systems allow easy access by bats, mice and other critters. Pests enter the attic directly by bypassing the ridge vent.

Previously, the solution was to use a black roofing foam to secure the ridge vent to the roof (not impacting ventilation). While this method is successful, it is not necessarily a permanent solution and periodic maintenance is required. The long-term solution is Ridge-Guard™!

It's Plastic

Unprotected ridge vent with bat guano and entry points.

Pest Exclusion & Prevention

About Ridge-Guard™

Ridge-Guard™ is manufactured in America and is used to secure most types of ridge vents from bats, mice and other critters. The product is being widely installed across the United States.

Standard plastic ridge-venting, as well as most other types of roof ridge vents, can be protected from pests by the application of Ridge-Guard™. The product is made from black power coated steel and defends your ridge vent from bats and gnawing rodents.

PROBLEM

Ridge vents are installed to ventilate attic spaces. These vents provide a weather barrier to the 2-3 inch construction gap on the peak of the roofline. Ridge vents provide protection from rain, but they do permit bats and mice to squeeze between the ridge vent and the roof decking right into your attic space.

Bat Entry Points:

Bats only require 3/8 inch gap to gain access to a home. Ridge vents are the primary weak point on a home and is the most difficult to secure from bats.

Mice Entry Points:

Mice only require 1/4 inch gap to gain access to a home. Mice can climb the side of the home and gain access through the roof. Foam is no match for the gnawing abilities of mice.

SOLUTION

Ridge-Guard™ is a long term solution to secure your ridge vents from bats and mice. It looks great on a variety of shingle styles.

Ridge-Guard™:

- Heavy Duty
- Almost Invisible
- Black, Powder Coated Steel

It's Steel!

Successful project completed by our team.
